Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- · All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle , \leq , > , \geq , \pm \rangle$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under "Specifications with limits" above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bits per second (Gbps), million bits per second (Mbps), thousand bits per second (kbps), million symbols per second (Msps) or thousand symbols per second (ksps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Mbps, Msps, ksps and Msample/s are not SI units.

Differential signals

General description		Calculation of differential and common mode signals from p part and n part connected to separate input channels. The R&S®RTO64 digital trigger concept enables these signals to be used as a trigger input.	
Input channels		channel 1, channel 2, channel 3, channel 4	
Differential signal	difference between two input channels	channel 1 and channel 2, channel 3 and channel 4	
Common mode signal	sum of two input channels	channel 1 and channel 2, channel 3 and channel 4	
Maximum number of outputs	differential signals	2	
	common mode signals	2	

 $^{^{2}\,\,}$ Waveform averaging is not compatible with peak detect decimation.

High definition mode

General description	The high definition mode increases the numeric resolution of waveform signals with			
	0	digital filtering to reduce noise. The signals with increased numeric resolution are used as a triggering input thanks to the R&S®RTO64 digital trigger concept.

Waveform measurements

General features	measurement panels	up to 8 measurement panels; each panel may contain any number of automatic measurements of the same category
	gate	delimits the display region evaluated for automatic measurements
	reference levels	user-configurable vertical levels define support structures for automatic
	statistics	measurements displays maximum, minimum, mean, standard deviation, RMS and measurement count for each automatic measurement
	track	measurement results displayed as continuous trace that is time-correlated to the measurement source
	long-term analysis	history of selected measurements as trace against count index
	histogram	available for the main measurement of each measurement panel; automatic or manual selection of bin number and scale; counters for measurements under, within and over the histogram range
	limit check	measurements tested against user-defined margins and limits; pass or fail conditions may launch automatic response: acquisition stop, beep, print and save waveform
Measurement category	amplitude and time	amplitude, high, low, maximum, minimum, peak-to-peak, mean, RMS, sigma, overshoot, area, rise time, fall time, positive width, negative width, period, frequency, duty cycle, delay, phase, burst width, pulse count, positive switching, negative switching, cycle area, cycle mean, cycle RMS, cycle sigma, setup/hold time, setup/hold ratio, pulse train, slew rate rising, slew rate falling, DC voltmeter (requires Rohde & Schwarz active probe with R&S®ProbeMeter functionality)
	eye diagram	extinction ratio, eye height, eye width, eye top, eye base, Q factor, S/N ratio, duty cycle distortion, eye rise time, eye fall time, eye bit rate, eye amplitude, jitter (peak-to-peak, 6-sigma, RMS)
	spectrum	channel power, bandwidth, occupied bandwidth, harmonic search, total harmonic distortion THD in dB and % using power values, total harmonic distortion variants THDa, THDu and THDr using voltage, overall voltage and overall voltage root means square, peak list (THDa, THDu, THDr and peak list require R&S®RTO6-K37 option)
	jitter	cycle-to-cycle jitter, N-cycle jitter, cycle-to-cycle width, cycle-to-cycle duty cycle, time-interval error, data rate, unit interval, skew delay, skew phase; requires R&S®RTO6-K12 option

Cursors	setup	up to 4 cursor sets on screen, each set consisting of two horizontal and two vertical cursors
	target	acquired waveforms (input channels), math waveforms, reference waveforms, track waveforms, XY diagrams
	operating mode	vertical measurements, horizontal measurements or both; vertical cursors either set manually or locked to waveform
Histogram	source	acquired waveform (input channels), math waveform, reference waveform
	mode	vertical (for timing statistics), horizontal (for amplitude statistics)
	automatic measurements	waveform count, waveform samples, histogram samples, histogram peak, peak value, maximum, minimum, median, range, mean, sigma, mean ± 1, 2 and 3 sigma, marker ± probability

Mask testing

Test definition	number of masks	up to 8 simultaneously
	source	acquired waveforms (input channels), math waveforms
	fail condition	sample hit or waveform hit
	fail tolerance	minimum number of fail events for test fail in range from 0 to 4 000 000 000
	test rate	up to 600 000 waveforms/s
	action on error	acquisition stop, beep, print and save waveform
	save/load to file	test and mask settings (.xml format)
Mask definition with segments	number of independent segments	up to 8
•	segment definition	array of points and connecting rule (upper, lower, inner) define segment region
	segment input	point and click on touchscreen, editable list
Mask definition with tolerance tube	input signal	acquired waveform
	definition of tolerance tube	horizontal width, vertical width, vertical stretch, vertical position
Mask definition with eye mask assistant	primary mask shape	
(requires R&S®RTO6-K12 option)	type	diamond, square, hexagon, octagon
	dimensions	main and secondary height, main and
		secondary width, depending on selected shape
	position	vertical offset, horizontal offset
	secondary mask shapes	
	locations	any combination of left, right, top, bottom
	position	horizontal and vertical offset with respect to center of primary mask shape
Result statistics	category	completed acquisitions, remaining acquisitions, state, sample hits, mask hits, fail rate, test result (pass or fail)
Visualization options	waveform style	vectors, dots
	violation highlighting	hits (on/off), highlight persistence (50 ms to 50 s or infinite), waveform color (default: red)
	mask colors	configurable colors for mask without violation (default: translucent gray), mask with violation (default: translucent red), mask with contact (default: translucent pale red)

Waveform math

General features	number of math waveforms	up to 4
	number of reference waveforms	up to 4
	waveform arithmetic	user-selectable average or envelope of consecutive waveforms
Algebraic expressions	user may define complex mathematical e	xpressions involving waveforms and
	measurement results	
	math functions	add, subtract, multiply, divide, absolute value, square, square root, integrate, differentiate, exp, log ₁₀ , log _e , log ₂ , rescale, sin, cos, tan, arcsin, arccos, arctan, sinh, cosh, tanh, autocorrelation, crosscorrelation
	logical operators	not, and, nand, or, nor, xor, nxor
	relational operators	Boolean result of =, ≠, >, <, ≤, ≥
	frequency domain	spectral magnitude and phase, real and imaginary spectra, group delay
	digital filter	lowpass, highpass
	special functions	CDR transform; requires R&S®RTO6-K12 option
Optimized math	operators	add, subtract, multiply, invert, absolute value, differentiate, log ₁₀ , log _e , log ₂ , rescale, FIR, FFT magnitude
Spectrum analysis	FFT magnitude spectrum	
	setup parameters	center frequency, frequency span, frame overlap, frame window (rectangular, Hamming, Hann, Blackman, Gaussian, Flattop, Kaiser Bessel), user-selectable spectrum averaging, RMS, envelope, max. hold and min. hold (max. hold and min. hold require R&S®RTO6-K37 option)
	max. realtime waveform acquisition rate	> 1000 waveforms/s

Search and mark function

General description	scans acquired waveforms for occurrence of a user-defined set of events and highlights			
	each occurrence	each occurrence		
Basic setup	source	all physical input channels, math waveforms, reference waveforms		
	search panels	up to 8, where each panel may manage multiple event searches		
	search mode	manually triggered or continuous		
	search conditions			
	supported events	edge, glitch, width, runt, window, timeout, interval, slew rate, data2clock, state		
	event configuration	identical to corresponding trigger event		
	event selection	single or multiple events on same source		
Search oscilloscope	mode	current waveform, gated time interval		
Result visualization	table			
	sort mode	horizontal position or vertical value		
	max. result count	specifies max. table size		
	zoom window	centered on highlighted event		

Display characteristics

Diagram types	Yt, XY, spectrum, long-term measurement, spectrogram (spectrogram requires R&S®RTO6-K37 option)	
Display interface configuration	display area can be split up into separate diagram areas by dragging and dropping signal icons;	
	each diagram area can hold any number of signals;	
	diagram areas may be stacked on top of each other and later accessed via the dynamic tab menu	
Signal icon	each active waveform is represented by a separate signal icon on the signal bar; the signal icon displays individual vertical and acquisition settings; a waveform can be minimized to signal icon to appears as a realtime preview in miniature; measurement results may also be minimized to a signal icon	
Toolbar	quick access to 28 important tools; directly set most common parameters in a simple menu and access to more detailed parameters in main menu; user-defined selection of tools in toolbar	
Upper menu	displays trigger, horizontal and acquisition settings; quick access to settings	
Main menu	provides access to all instruments settings in compact menu	
Axis label	X-axis ticks and Y-axis ticks labeled with tick value and physical unit	
Diagram label	diagrams may be individually labeled with a descriptive user-defined name	
Diagram layout	grid, crosshair, axis labels and diagram label may be switched on and off separately	
Persistence	50 ms to 50 s, or infinite	
Zoom user-defined zoom window provides vertical and horizontal zoom; each diagram area supports multiple zoom windows;		
	touchscreen interface simplifies resize and drag operations on zoom window	
Signal colors	predefined or user-defined color tables for persistence display

R&S®RTO6-K12 jitter analysis

General description	The R&S®RTO6-K12 jitter analysis option extends the functionality of the standard R&S®RTO64 firmware with a suite of measurement, analysis and visualization tools for		
	signal integrity analysis and jitter characterization.		
Waveform measurements	category jitter		
	measurement functions	cycle-to-cycle jitter, N-cycle jitter, cycle-to-cycle width, cycle-to-cycle duty cycle, time-interval error, data rate, unit interval, skew delay, skew phase; the standard time measurements period, frequency and setup/hold are also available in the jitter category for convenience	
	track	measurement results displayed as continuous trace that is time-correlated to the measurement source; applicable to time measurements from categories "jitter" and "amplitude and time"; track trace may be used as source for cursor measurements, automatic measurements, math waveforms and reference waveforms	
Waveform math	FFT on track	FFT spectrum of the track trace of measurement results	
	CDR transform	recovers clock timing from source waveform with software CDR and generates synthetic clock waveform that is time-correlated to source	
Software clock data recovery (CDR)	number of CDR instances	up to 2; independently configurable	
Command shows data reservery (CETTY)	algorithm	phase-locked loop (PLL), constant frequency	
	configuration	nominal bit rate, PLL order (first or second), PLL loop bandwidth, PLL damping factor, initial phase alignment, result selection during initial synchronization	
Mask testing with eye mask assistant	primary mask shape		
<i>,</i>	type	diamond, square, hexagon, octagon	
	dimensions	main and secondary height, main and secondary width, depending on selected shape	
	position	vertical offset, horizontal offset	
	secondary mask shapes		
	locations	any combination of left, right, top, bottom	
	position	horizontal and vertical offset with respect to center of primary mask shape	

R&S®RTO6-K13 clock data recovery

General description	The R&S®RTO6-K13 realtime clock data recovery (CDR) option activates the hardware CDR circuitry integrated into the R&S®RTO64 oscilloscope. It provides realtime clock recovery for non-return-to-zero (NRZ) serial data up to 5.0 Gbps. The recovered clock may be used for triggering and jitter analysis.		
Hardware clock data recovery (CDR)	description	fully digital implementation of PLL-based clock data recovery	
	sources	channel 1, channel 2, channel 3, channel 4	
	configuration parameters	PLL order (first or second), nominal bit rate, loop bandwidth, relative bandwidth, damping factor, unit interval offset	
	bit rate range		
	R&S®RTO6-B90, R&S®RTO6-B91, R&S®RTO6-B92, R&S®RTO6-B93 options	200 kbps to 2.5 Gbps	
	R&S®RTO6-B94 option	200 kbps to 2.5 Gpbs standard, 400 kbps to 5.0 Gbps when operating at 20 Gsample/s realtime sampling rate ⁸	
	R&S®RTO6-B96 option	400 kbps to 5.0 Gbps standard, 200 kbps to 2.5 Gpbs when operating at 10 Gsample/s realtime sampling rate ⁹	
	relative bandwidth	1/500 to 1/3000 of the nominal bit rate	
	damping factor	0.5 to 1.0; relevant for second order PLL only	
	unit interval offset	0.0 to 1.0	
Trigger modes	CDR	triggers on clock signal recovered from the trigger source signal; phase of the trigger instant user-selectable as fraction of bit period	
	serial pattern	main trigger mode "serial pattern" supports the hardware CDR as additional clock source; sampling point user-selectable as	
		fraction of bit period	
Jitter analysis	The data and clock timing information of the hardware CDR may be acquired in realtime concurrently to the input data waveform. Analysis of the realtime CDR timing information is possible by means of compatible measurement, analysis and		
	visualization tools provided in the R&S®RTO6-K12 jitter analysis option. 10		
	measurement functions	time-interval error (TIE), data rate, unit interval	
	math functions	CDR transform interprets the acquired	
	main fulletions	clock timing information and generates a	
		synthetic clock waveform that is time-	
		correlated to the input data waveform

⁸ In general terms, the frontend of the R&S®RTO6-B94 option samples at 20 Gsample/s when: at most one channel from each pair {channel1, channel2} and {channel3, channel4} is active; and the user-selected sampling resolution in realtime sampling mode or interpolated time sampling mode is 50 ps or smaller.

⁹ In general terms, the frontend of the R&S®RTO6-B96 option samples at 20 Gsample/s when at most one channel from each pair {channel1, channel2} and {channel3, channel4} is active, otherwise the sampling rate is 10 Gsample/s.

¹⁰ Realtime CDR timing information can be acquired when the frontend is operating at 10 Gsample/s realtime sampling rate.

R&S®RTO6-K21 USB 2.0 compliance test

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO6-K21 performs USB 2.0 compliance test measurements with R&S®ScopeSuite, including tests for USB 2.0 (high speed), USB 1.1 (full speed) and USB 1.0 (low speed) with the R&S®RTO. R&S®ScopeSuite supports the R&S®RT-ZF1 USB 2.0 compliance test fixture set, the Allion USB test fixture solutions and the USB-IF signal quality board device/host; R&S®ScopeSuite supports Windows 7, 8 and 10.

Supported USB 2.0 complian

R&S®RTO6-K31 power analysis

General description	The R&S®RTO6-K31 power analysis option extends the R&S®RTO64 firmware with	
	measurement functionality focused on switched mode power supplies (SMPS) and	
	DC/DC converters.	and the first of a super modification
Input	quality	evaluation of power quality at an AC input; measures real power, apparen power, reactive power, power factor and phase angle of power, frequency, crest factor, RMS of voltage and current
	harmonics	measures up to the 40th harmonic of the incoming line frequency; precompliance checking for IEC 61000-3-2 (A, B, C, D), RTCA DO-160, MIL-STD-1399, max. lim checks
	inrush current	measures peak inrush current; multiple measurement zones configurable with analysis of the post-inrush behavior
Switching/control loop	slew rate	The slope of current or voltage is measured at start and end of the switching cycle.
	modulation	measures modulation of switching frequency and duty cycle under steady state and start-up conditions
	dynamic on-resistance	measures resistance of the switching transistor(s) in active state
Power path	efficiency (only for 4 channel devices)	measures input and output power to calculate the efficiency of an SMPS
	loss	measures switching loss and conduction loss of a power device
	safe operating area (SOA)	checks violation of voltage and current limits in which a power device can operate without damage; current versus voltage view (linear or log); violation mask is user-defined and editable in linear and log-log views
	turn on/off	measures relationship between AC and DC current, when turning the SMPS off and on
Output	ripple	measures AC components of output voltage and current, AC RMS, frequency duty cycles, min./max./peak-to-peak amplitude
	spectrum	FFT analysis of output, measurement of frequency peaks
	transient response	This measurement captures the device behavior between the event of load changes and stabilization; includes peak (voltage, time), settling time, rise time, overshoot and delay
Deskew	automated	By using the R&S®RT-ZF20 probe deskew and calibration test fixture and Rohde & Schwarz voltage and current probes, the skew between the voltage and current signal is compensated automatically.
Reporting	easy reporting: Click to save a measurement. Report generation using user-selected test results from historical and currently active tests. Put repeated and/or different measurements in one report.	

R&S®RTO6-K37 spectrum analysis

General description	The R&S®RTO6-K37 spectrum analysis allows advanced signal analysis in the		
	frequency domain.		
Spectrogram	display characteristics	spectrogram display; a separate spectrogram can be created for each FFT display; each FFT segment of a captured acquisition is displayed in a separate spectrogram line support of logarithmic frequency x-axis	
	number of spectrograms	up to 4	
	signal colors	predefined or user-defined color tables for persistence display with the spectrogram	
	time lines	in stop mode two separate time lines can be used to navigate through a spectrogram in time; for each time line the relevant FFT segment is displayed in a diagram; the difference in acquisition time between the timelines is displayed	
Logarithmic frequency x-axis	display characteristics	logarithmic frequency x-axis for the FFT display with support of analysis tools like cursors and masks	
		logarithmic frequency x-axis for the spectrogram display	
Waveform measurements	measurement functions	total harmonic distortion variants THDa, THDa and THDr using voltage, overall voltage and overall voltage root means square	
	peak list	peak list; diagram labels for easy identification of the peak list entries in the diagram	
Waveform math		user-selectable max. hold and min. hold in addition to spectrum averaging, RMS and envelope	

R&S®RTO6-K81 PCI Express 1.1/2.0 compliance test

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO6-K81 performs PCIe 1.x/2.0 (up to 2.5GT/s) compliance test measurements with R&S®ScopeSuite. R&S®ScopeSuite supports Windows 7, 8 and 10. The option can only be used with an R&S®RTO6-B96 option. The chapters after the category refer to PCI Express Base Specification Revision 1.1 and 2.1.

R&S®RTO6-K87 Ethernet compliance test (1000BASE-T1)

The option is used in combination with the free-of-charge R&S $^{\circ}$ ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S $^{\circ}$ RTO6-K87 performs 1000BASE-T1 compliance test measurements with R&S $^{\circ}$ ScopeSuite and R&S $^{\circ}$ RT-ZF78 test fixtures. For the transmitter distortion test, the R&S $^{\circ}$ RT-ZF6 frequency converter is supported in combination with the R&S $^{\circ}$ RTO6-B6 AWG (running in 125 MHz mode). R&S $^{\circ}$ ScopeSuite supports Windows 7, 8 and 10. The option requires an R&S $^{\circ}$ RTO64 with a bandwidth \geq 2 GHz.

R&S®RTO6-K91 DDR3/DDR3L/LPDDR3 signal integrity debug and compliance test

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTO6-K91 performs DDR3, DDR3L and LPDDR3 compliance test measurements with R&S®ScopeSuite. Furthermore, it enables the DDR3 decode capability to separate read and write bursts as well as the eye analysis function for mask testing on the oscilloscope. R&S®ScopeSuite supports Windows 7, 8 and 10.

R&S®RTO6-K99 R&S®ScopeSuite automation

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. It requires matching compliance test options (see below). R&S®RTO6-K99 makes it possible to automate the supported compliance options remotely. After remote execution of a test case the user can collect the results to process them in a proprietary software to create own reports.

R&S®RTO6-K500 bus analysis

General description	The R&S®RTO6-K500 bus analysis option adds bus measurements and analysis functions for dedicated protocols.		
	supported protocols	I ² C, SPI, UART, CAN/CAN-FD, LIN, SENT Ethernet(10BASE-T/100BASE-Tx), RFFE, Automotive Ethernet (100BASE-T1/1000BASE-T1)	
Measurements	field value	allows for the selection of frame types and displays the value of a specified field; the value can be displayed as track and histogram	
	frame to frame	measures the distance between the starts of two selectable frame types in seconds	
	trigger to frame	measures the distance between the trigger event and the start of a selectable frame type in seconds; alternatively, it measures the distance between the start of a selectable frame type and the trigger event	
	frame count	counts the total number of frames in each acquisition	
	gap time	measures the distance between the end of a selectable frame type to the start of another selectable frame type in seconds	
	bus idle ratio	measures the percentage of idle time on a bus; idle time is defined as the time where the bus is not occupied by frames	
	main bit rate	measures the main bit rate of a protocol based on the relevant bits in a frame; if a protocol provides multiple bit rates, the most relevant bit rate is being measured	
	secondary bit rate	for protocols with multiple bit rates, the secondary bit rate is available	
	frame error count	counts the total number of erroneous frames in each acquisition	
	frame error rate	measures the percentage of erroneous frames in relation to the total frames	
	consecutive frame error rate	measures the percentage of follow up (consecutive) frame errors, ignoring all single frame errors

Trigger	trigger event setup	TLP (transaction layer packets), DLLP (data layer packets), ordered sets, errors
	TLP (transaction layer packets)	any type, memory request (32/64 bit, R/W, ordering, snoop, seq. number, Requester ID), I/O transactions, configuration requests, message requests (incl. routing and message code), completion packets (status, completer ID), atomic operation (FetchAdd, SWAP, CAS) for 32/64 bit
	DLLP (data layer packets)	any type, Ack and Nak (seq. number), InitFC1, InitFC2, updateFC (credit type C, NP, Cpl and virtual channel), power management with PM type, vendor packet format. multi-root I/O virtualization (MRDLLP): MRInit (phase, VH FC, mixed type, authorized, device/port type), MRReset (A, VH Group), MRUpdateFC, MRInitFC1 and MRInitFC2 (VL number, VH absent, TLP type, credit type)
	ordered sets	SKP OS, training sequence (TS1, TS2), fast training sequence (FTS), electrical idle OS, electrical idle exit OS, compliance and modified compliance pattern
	errors condition setup	CRC16, ECRC, LCRC, disparity, invalid packets (corrupt header or length errors)
Decode	display type	decoded bus, tabulated list, decode layers, detailed result display for packets
	color coding	TLP, DLLP, K-code, D-code, ordered sets, errors
	data format	K/D symbol, 8 bit format (hex)
	decode layer	8b10b, descrambled 8b10b, bits
	result export	export of all result data into CSV, XML, HTM and PY file formats
Search	search event setup	TLP, DLLP, ordered sets, errors
	event settings	same as trigger event settings

Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge ¹⁸. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ¹⁸ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

Extended warranty with accredited calibration (AW1 and AW2)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs ¹⁸ and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

¹⁷ For options that are installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

¹⁸ Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.
