**Tektronix®**

Tailored Solutions for Embedded System Design.

Purchase any new MDO3000 or MDO4000C and get a **50%** discount on an application solution.

For a limited time, purchase any new MDO3000 or MDO4000C Series Oscilloscope and get a 50% discount on a Logic Analyzer, Arbitrary Function Generator and Embedded serial triggering and analysis application bundle.

Save up to £2,109 with our application solution bundles.

- **MDO3MSO / MDO4MSO**

The logic analyzer provides 16 digital channels integrated into the oscilloscope's user interface, simplifying operation and making it possible to easily solve mixed-signal issues.

- **MDO3AFG / MDO4AFG**

The integrated arbitrary function generator is perfect for simulating sensor signals within a design or adding noise to signals to perform margin testing.

- **MDO3EMBD / DPO4EMBD**

Tired of having to visually inspect the waveform to count clocks, determine if each bit is a 1 or a 0, combine bits into bytes, and determine the hex value? Let the oscilloscope do it for you! Decode each packet on the bus and display the value in hex, binary, decimal, signed decimal, or ASCII in the bus waveform.
